

# WaterApps Capability Statement

Cloud Platform Engineering | DevSecOps | Regulated Delivery

Page 1

WaterApps helps regulated teams design, secure, and scale cloud delivery systems with practical engineering execution.

## Company Snapshot

- Legal entity: Water Apps Pty Ltd
- ABN: 63 632 823 084
- Primary region: Australia
- Model: Principal-led delivery with specialist augmentation as needed

## Core Services

- Platform engineering and cloud modernization
- DevSecOps and CI/CD hardening with auditable controls
- Kubernetes architecture, security baseline, and delivery enablement
- Operational runbooks, automation, and reliability improvements

## Engagement Types

- Discovery and architecture assessment
- Targeted remediation and technical uplift
- Delivery acceleration with repeatable templates and playbooks
- Advisory support for procurement and enterprise readiness

## Regulated Environment Alignment

Experience supporting delivery contexts in banking, government, and telecommunications.

Emphasis on evidence-linked workflows, least-privilege controls, and repeatable operational governance.

Public artifacts are sanitized by design while deeper detail can be shared during procurement stages.

## Representative Outcomes

- Reduced delivery lead time through standardized CI/CD and environment controls.
- Improved deployment safety using approval gates, traceable change records, and runbook-driven operations.
- Higher platform consistency via reusable infrastructure and documentation baselines.

## Operating Principles

# WaterApps Capability Statement

Cloud Platform Engineering | DevSecOps | Regulated Delivery

Page 2

- Build trust first: secure defaults, explicit ownership, and measurable controls.
- Ship with evidence: every delivery item links to proof of execution.
- Design for repeatability: productize useful patterns to reduce risk and cost over time.

## Contact and Next Step
